

# **GCE AS MARKING SCHEME**

**SUMMER 2023**

**AS  
ECONOMICS - UNIT 1  
2520U10-1**

## **INTRODUCTION**

This marking scheme was used by WJEC for the 2023 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

## **Positive Marking**

It should be remembered that learners are writing under examination conditions and credit should be given for what the learner writes, rather than adopting the approach of penalising him/her for any omissions. It should be possible for a very good learner to achieve full marks and a very poor one to achieve zero marks. Marks should not be deducted for a less than perfect answer if it satisfies the criteria of the mark scheme, nor should marks be added as a consolation where they are not merited.

**WJEC GCE AS ECONOMICS – UNIT 1**

**SUMMER 2023 MARK SCHEME**

**SECTION A**

| <b>Question</b> | <b>Answer</b> | <b>Assessment Objective</b> |
|-----------------|---------------|-----------------------------|
| 1               | C             | AO1                         |
| 2               | D             | AO1                         |
| 3               | A             | AO1                         |

#### **Indicative content**

##### **AO1**

Demand for, and supply of, many agricultural products is highly price inelastic, meaning that any changes in demand and/or supply produce proportionally large changes in price. The supply of agricultural goods is often vulnerable to external shocks, such as weather events (e.g. climate change, drought, wet weather etc.) or other natural phenomenon (e.g. crop diseases etc.).

##### **AO2**

Award any appropriate reference to the data or to context, e.g.:

- 'The price of olive oil fell by 44% from autumn 2018 to autumn 2019 after a record harvest.'
- Olives take time to grow on the vine, so have a relatively long production period.
- Olive oil is a staple/essential ingredient for consumers in many developed countries.

A diagram showing price inelastic demand and supply with a shift outwards of supply due to the "record harvest" and a significant fall in price of 44%

NOTE – diagrams are not essential for this question but may be rewarded as AO2 if included

|         |   |
|---------|---|
| 17. (b) | <p>Explain <u>one</u> likely benefit to the USA of imposing a tariff on Spanish olive oil. [3]</p>  |
|         | <p><b>AO1: 1 mark</b></p> <p>Award 1 mark for identification of one likely benefit to the USA of imposing a tariff.</p> <p><b>Indicative content</b></p> <ul style="list-style-type: none"> <li>• The tariff could help to improve the US' trade balance [1]</li> <li>• The tariff could help to protect any domestic olive oil producers in the USA / the jobs of any workers employed in producing olive oil in the USA [1]</li> <li>• The tariff will raise revenue for the US Government [1]</li> <li>• The tariff could help to protect the environment / health standards [1]</li> <li>• The tariff could help to prevent dumping or unfair competition [1]</li> <li>• The tariff could help to maintain self-sufficiency in olive oil / agricultural production in the USA [1]</li> </ul> <p><b>AO2: 1 mark</b></p> <p>Award 1 mark for any appropriate reference to context / use of the data should be credited.</p> <p><b>Indicative content</b></p> <ul style="list-style-type: none"> <li>• At this time, only 5% of the olive oil consumed in the USA was produced there [1]</li> <li>• Import tariffs of 25% were imposed on olive oil [1]</li> <li>• Spain is the world's largest olive oil producer [1]</li> </ul> <p><b>AO3: 1 mark</b></p> <p>Award 1 mark for relevant development/explanation of the identified benefit [1]</p> |

|         |   |
|---------|---|
| 18. (a) | <p><b><u>Apart from conducting monetary policy</u>, explain <u>one</u> role of the Bank of England.</b> [2]</p>   |
|         | <p><b>AO1: 1 mark</b></p> <p>Award 1 mark for identification of any role (<u>apart from conducting monetary policy</u>)</p> <p><b>Indicative content</b></p> <ul style="list-style-type: none"> <li>• Lender of Last Resort to the banking system</li> <li>• Financial stability and regulation</li> <li>• Banker to the government</li> <li>• Regulation of the banking industry</li> </ul> <p><b>AO3: 1 mark</b></p> <p>Award 1 mark for development/explanation of the identified role</p> <p><b>Indicative content</b></p> <ul style="list-style-type: none"> <li>• As the Lender of Last Resort, the Bank of England offers loans to banks or other eligible institutions that are experiencing financial difficulty or are considered highly risky or near collapse.</li> </ul> |

|                |   |  |

**Indicative content:**

**AO3**

Award any appropriate factors, e.g.:

- GDP growth and the level of spare capacity/underemployment in the economy – this helps to determine how much impact a change in the level of aggregate demand might have on the average price level/inflation rate in the economy.
- Bank lending and consumer credit figures – this helps to determine how households would be affected by a change in borrowing costs, and hence what might happen to consumption and loan repayment.
- Equity markets (share prices) and house prices – both are considered important in determining household wealth, which then affects through to borrowing and consumer spending.
- Consumer confidence and business confidence – confidence surveys can show future consumption and investment plans, helping the Bank to predict aggregate demand and aggregate supply levels.
- Growth of wages/average earnings – this would raise firms' costs of production leading to cost-push inflation, and may increase consumer spending, putting upward pressure on aggregate demand and causing demand-pull inflationary pressures also.
- Unemployment figures – these give an indication of the level of spare capacity in the economy and can also help to determine household spending plans.
- Government fiscal policy – planned fiscal policy will help to determine what may happen to aggregate demand via effects on consumption, investment and government spending.
- Oil and other commodity prices – these impact firms' costs of production, and firms may then pass these on to consumers in their final prices, affecting the rate of inflation.
- Trends in global foreign exchange markets – a weaker exchange rate could be seen as a threat to inflation because it raises the prices of imported goods and services. A strong exchange rate might bring down inflation but risk causing a deeper economic slowdown via a fall in exports.
- International data – including recent developments in the eurozone, emerging market countries and the United States and Japan – these might help to forecast what will happen to the UK's export sales in the future.

**AO4**

Possible lines of argument include:

- Prioritisation of different factors.
- The monetary policy time lag means that the MPC are aiming to reach the inflation target 18-24 months in the future, so any variation/volatility in the data will make it less useful.
- Regional variation in data (e.g. unemployment rate) may mean that it does not give a clear indication of the best policy.
- Possible inaccuracy/limitations of the data reduce its usefulness to the MPC, e.g. survey data may be quickly out-of-date, biased etc.
- Consumers and firms do not always behave rationally, making it more difficult to predict their behaviour in light of changes to any economic variables.

## Indicative content

### AO1/AO3

Income inequality is the degree to which income is distributed unequally in an economy or population.

Possible policies include (do not award progressive taxation):

- Increases in the National Minimum Wage / introduction of a regional minimum wage: although this has increased in real terms over recent years, it is still a fraction of median earnings in the UK, and the introduction of a higher regional minimum wage in London and the south east would recognise the higher cost of living in these areas.
- Increases in benefits: ending the benefits freeze imposed in 2015 / continuing the move from universal to means-tested benefits / making certain benefits more generous and/or easier to claim / solving the issues with the implementation of Universal Credit etc.
- Further expansion of child care schemes, e.g. the Sure Start programme for low income mothers living in the most disadvantaged areas who want to work, or increased access to subsidised child care.
- Reduction/abolition of university tuition fees / re-introduction of student maintenance grant to encourage those from low-income households to go to university.
- Abolition of private schools.
- Increased investment in education and training to boost the earning potential and employability of those in unemployment or of children living in areas with low average incomes.
- Increased investment in healthcare to boost the earning potential and employability of those living in areas with low average incomes.
- Maximum wage, e.g. for executive pay.
- Job protection reforms, e.g. government intervention in the gig economy / zero-hour contracts.
- Policies which foster the integration of immigrants and fight all forms of discrimination.
- Regional policies to boost growth/infrastructure/investment in the areas with the lowest average incomes.

### AO4

Possible lines of argument include:

- Cost / opportunity cost of such policies.
- Time lag for supply-side policies.
- Increases in the National Minimum Wage / job protection reforms may cause increases in unemployment, harming those the policy is trying to help (government failure)
- Making benefits more generous may reduce people's incentive to work.
- Reduction/abolition of university tuition fees may lower the quality of university education, reducing its benefit to students from lower income areas.
- Prioritisation between policies.

| Question  | ASSESSMENT OBJECTIVES |           |           |           |             | Quantitative skills marks |
|---|-----------------------|-----------|-----------|-----------|-------------|---------------------------|
|   | AO1 marks             | AO2 marks | AO3 marks | AO4 marks | Total marks |                           |
